Biology and Field Identification of Amphibians and Reptiles

Lynda Miller

July 28th - August 6th, 2020

This seminar will discuss eastern North American species of amphibians and reptiles north of Florida, how to identify them, where to look for them, and interesting information about their natural history. Basic information about migration, communication, overwintering, and reproduction will be included. The seminar will utilize Zoom for interactive lectures and discussions in which power point presentations will be shared. Participants will be encouraged to spend time in the field taking photographs and videos of amphibians and reptiles that they find. These will be shared online so species identifications and their natural history can be discussed. There will be suggested readings between classes and chances to discuss those readings. This seminar is intended for participants who are interested in continuing to look for and learn about herps in their home area.

Scheduling Details

July 28: 7-9 PM EST

July 30: 7-9 PM EST

August 1: 7-9 PM EST

August 4: 7-9 PM EST

August 6: 7-9 PM EST

Participants need to have a Zoom account (<https://zoom.us...> sign up is free). You will receive a secure link to join the instructor before each class. Classes will be recorded so participants can review them or make up missed ones.

About the Instructor

Lynda Miller (lrmiller66@hotmail.com) is a faculty member in the biology department at College of the Ozarks in Point Lookout, Missouri where she teaches a variety of classes including Ecology and Herpetology. She has been studying and publishing papers on amphibians and reptiles in addition to other ecological and natural history topics for many years.
