## Journal of the North Atlantic

Senior Editors:

**Jette Arneborg**, National Museum of Denmark; **Gerald Bigelow**, University of Southern Maine, USA; **Andrew Dugmore**, University of Edinburgh, Scotland, UK; **Orri Vésteinnsson**, Institute of Archaeology, Iceland.

The *Journal of the North Atlantic* (JONA) is a multidisciplinary, peer-reviewed and edited archaeology and environmental history journal focusing on the peoples of the North Atlantic, their expansion into the region over time, and their interactions with their changing environments. Since it is a full-featured online-only journal, articles can be quickly published and made available to researchers worldwide. Journal content can be conveniently accessed both by subscription and on a single article basis. The journal has

no publication fees, even for Special Volumes and large Monographs. The journal follows an article-by-article publishing model for both regular and special

volumes. Whenever a manuscript has completed its peer review process and the article galley has been approved by the author, it will be immediately published online in the BioOne database and on the JONA website. In effect, this means that articles are grouped online over time, i.e., the table of contents of volumes will grow as articles are posted online. The journal's article-by-article publishing model works well for special volumes since it rewards prompt authors, while enabling tardier authors to retain the option of being included in a special volume without delaying its publication. The 2008 regular volume is currently in progress and is available online. The journal is indexed in a full range of journal content databases.

The *Journal of the North Atlantic* publishes a wide diversity of research papers, as well as research summaries and general interest articles in closely related disciplines, which, when considered together, help contribute to a comprehensive multidisciplinary understanding of the historical interplay between cultural and environmental changes in the North Atlantic world. Specifically, the journal's focus includes paleoenvironmental

reconstruction and modelling, historical ecology, archaeology, ecology of organisms important to humans, anthropology, human/environment/climate interactions, climate history, ethnography, ethnohistory, historical analyses, discussions of cultural heritage, and place-name studies. The journal may be accessed on the BioOne.org database and on the journal's own website. Authors may include supporting files such as video, database, and audio files, and to freely include color photographs and figures with their articles.
