An archaeology and environmental history journal ...

Side prong of antler for a bird dart and a Marlin spike of walrus tusk from Norse farms in Greenland. Both dated to the 14th century. (From Gullov 2008).

Journal of the North Atlantic

The *Journal of the North Atlantic* (JONA) is a multi-disciplinary, peer-reviewed and edited archaeology and environmental history journal focusing on the peoples of the North Atlantic, their expansion into the region over time, and their interactions with their changing environments. The journal is published online in the BioOne.org database and on the JONA website, and is indexed in a full range of journal databases. It serves as a forum for researchers, and as an information resource for instructors, students, and the intellectually curious who would like to learn about the latest research and study opportunities within the region.

The journal publishes a wide diversity of research papers, as well as research summaries and general interest articles in closely related disciplines, which, when considered together, help contribute to a comprehensive multi-disciplinary understanding of the historical interplay between cultural and environmental changes in the North Atlantic world. Specifically, the journal's focus includes paleo-environmental reconstruction and modelling, historical ecology, archaeology, ecology of organisms important to humans, anthropology, human/environment/climate interactions, climate history, ethnography, ethnohistory, historical analyses, discussions of cultural heritage, and place-name studies.

The journal follows an article-by-article publishing model for both regular and special volumes. Whenever a manuscript has completed its peer review process and the article galley has been approved by the author, it will be immediately published online in the BioOne database and on the JONA website. In effect, this means that articles are grouped online over time, i.e., the table of contents of volumes will grow as articles are posted online. This publishing model works well for special volumes, since it rewards prompt authors, while enabling tardier authors to retain the option of being included in a special volume without delaying its publication.

The *Journal of the North Atlantic's* publishing format is versatile enough that authors can include supplementary files with their articles. These may include dataset, figure, and table files (e.g., files requiring a larger than normal journal page size, such as large maps). These may also include text and protocol files, audio and video files (e.g., for ethnographic and animal behavior studies), and even Powerpoint files. Supplementary files are also subject to peer review.

The *Journal of the North Atlantic* (ISSN #1935-1933) is a collaborative publishing effort, with an international 38-member Board of Editors (see reverse).
