

eBio Submission and Publishing Considerations

Submission and Publication Considerations

Publishing format. *eBio* follows an article-by-article publishing model, so that each article will be published promptly online upon completion, with its own cover featuring a color photograph relating to the article.

Language considerations. The publication language of the journal is English.

Author considerations. Manuscripts may be submitted by anyone knowledgeable about a subject in the biological sciences outside of the natural history disciplines. Authors are encouraged to get outside review of their manuscript before submitting it to the journal. Manuscripts derived from dissertations and theses are welcome, especially when seasoned perspective is added through co-authorship by faculty members.

Manuscript subject matter. The journal welcomes manuscripts focused on a variety of subject areas related to the biology of organisms as it relates to the structure, function, and development of their internal systems, and as it pertains to their use in medical and other applications not directly related to the ecology and conservation of species or their habitats, including, but not limited to, biochemistry, biotechnology, cell biology, genetics and genomics, immunology, microbiology, molecular biology, neurobiology, physiology, parasitology, and toxicology.

Manuscript length. The journal does not have any set limits on word or page counts. Rather it is important that authors concisely and succinctly present all the information needed for the reader to fully understand the research or observations being described as well as all of the relevant implications and appropriate conclusions in light of previous findings and publications on the topic, while avoiding the inclusion of extraneous or only tangentially related information (however, note that we do offer the option of including linked online supplemental material, which, though not integral to a full understanding of the manuscript, might be valuable for those wishing to take a deeper dive into the research conducted).

Submission of manuscripts. Submission is made via Scholastica (<https://ebio.scholasticahq.com/for-authors>). Cover letter must include a statement that the manuscript has not been published or submitted for publication elsewhere, either in whole or in part and a statement that the authors are able to commit institutional funds and/or personal funds to cover the page charges for articles (see section below on page charges for details and exceptions). Authors are encouraged to suggest the name, qualifications, and e-mail contact information of potential guest editors (subject matter experts who oversee the review process for particular manuscripts) and/or reviewers. Please let us know if any aspects of your manuscripts could be considered potentially controversial in some way. This information helps the journal to better understand such manuscripts and to consider options for an impartial and balanced peer review process.

We will acknowledge the receipt of all submissions, so if you do not hear from us within a week of your submission, please contact us.

Review of manuscripts. All manuscripts will be peer-reviewed by a manuscript or guest editor in collaboration with two reviewers, all subject matter experts, each of whom will make editorial recommendations. Manuscripts will be edited in collaboration with the author(s) for readability, clarity, accuracy, and brevity. Editors generally follow conventions of the CSE Style Manual (Council of Science Editors).

Revisions, acceptance, and galley. Revisions of manuscripts should be completed promptly, generally within no more than 4 weeks time. Once a manuscript has been revised and accepted for publication, the author will be asked to provide (1) an electronic copy of the manuscript text including any tables appendices, and figure captions (in Microsoft Word), (2) a pdf file of the final version of the complete manuscript including any figures, and (3) separate high quality (clear, crisp pdf or tif or jpg at a minimum of 350 ppi when sized to 5.28 inches in width) files for each of the figures sized as they are to appear in the journal, as well as for any proposed cover image figure(s). A galley version of each article will be sent to the author and guest editor, each of whom will review the galley for any necessary changes. If substantive changes are necessary, the author will be notified. To proceed to publication, authors are required to complete and submit a signed copy of a form we provide acknowledging the authors approve of the galley for publication. .

Page charges, PDFs, and posting files on websites. *eBio* has a page charge to help defray a portion of the cost of producing the journal. The rate is \$40 per page and, if applicable, a \$25 charge for each supplemental file. Allowances for special circumstances may be considered prior to acceptance for review. Consequences of changes in employment or affiliation need to be anticipated in a timely manner. Research sponsors, institutions, and authors understand that such contributions are routine and necessary to produce a high quality scientific journal that is published in a timely manner. Arrangements and a guarantee of payment are the personal responsibility of the authors. Without such contributions, the number of pages the journal can publish would depend too heavily on the subscription base of the journal, which would limit the kinds and number of manuscripts the journal can accept for review, thus limiting the journal's ability to meet the expectations of authors hoping to publish in the journal. There are no additional charges for color figures in online publications. Also, at no extra cost, authors are provided a print-quality pdf version of their published article with permission to post the file on their personal or their institution's

website.

Copyright Policy

The publisher, Eagle Hill Institute, reserves the copyright to all its publications. Any reproduction, other than for an individual's own personal and private use, or distribution of journal content is prohibited without written permission from Eagle Hill Institute.

Authors of articles published in *eBio* are allowed to post the pdf reprints of their articles on their own website or on the website or in the repository of their affiliated institution, as well as personally distribute copies to their colleagues, provided they do so along with a clear statement of the Institute's copyright policy as stated above.

Ethical Conduct

eBio requires that authors, reviewers, and editorial staff adhere to the highest ethical standards in the conduct of research, manuscript preparation, manuscript review, and evaluation. Failure to adhere to the ethical standards as summarized below may result in consequences as severe as banning authors from publication in the journal and removal of editors from the editorial board

By submitting a manuscript to *eBio* for consideration for publication, authors attest:

- The manuscript is the authors' own original work, which has not been previously published elsewhere.
- The manuscript is not currently being considered for publication elsewhere.
- The presented research is reported in an honest and complete manner.
- The manuscript properly recognizes the contributions of all authors. Authorship is conferred only to those who have made substantial contributions to the research, analyses, and preparation of the manuscript. All authors take public responsibility for the paper's content.
- The work of others is credited with proper literature citations or photo and figure credits. Portions of text from other publications are indicated by quotation marks and citation of the original source.

Ethical treatment of animals and compliance with laws and regulations

All studies involving capture, handling, banding, or collection of species should be compliant with recognized animal care procedures and protected species regulations.

Research must comply with all applicable laws or regulations of the jurisdiction in which the research occurred. Authors should acknowledge any research permits in the acknowledgment section of the manuscript.

Reviewer and editorial board ethical conduct

- Reviewers and members of the editorial board are expected to declare any conflicts of interest with the authors of a manuscript prior to agreeing to review. Conflict of interest includes institutional conflict (e.g., author and reviewer are members of the same institution), and personal conflict (e.g., family member, business partner, collaborator on current or previous research [previous three years], supervisor/advisor for graduate student or post-doc). Other types of conflicts may occur and it is the responsibility of the reviewer or editorial board member to acknowledge any potential conflict before providing a review.
- All reviews are expected to remain confidential with information shared only between reviewers, NENA editorial board members and staff, and authors.

eBio and its editorial staff adhere to a policy of non-discrimination with respect to race, ethnicity, religion, gender, sexual orientation, or disability.
